

# Digital Fax

Fax Without the Fuss. Modern.  
Mobile. Secure.

## ✓ Proven Benefits

### ➤ Modernize Faxing

- Remove analog lines and hardware
- Fax via email, browser, or app
- Integrate with your workflows

### ➤ Secure Information Exchange

- Meet HIPAA, GDPR, and privacy standards
- Encrypt transmissions and store in the cloud
- Monitor delivery and access logs

### ➤ Increase Efficiency

- Send large volumes without busy signals
- Avoid paper jams and machine errors
- Simplify communication with partners

## How Proven IT Delivers Faxing for the Digital Era

Faxing may seem outdated, but for many industries it's still essential. Proven IT's Cloud Fax solutions bring faxing into the modern age with digital, encrypted, and mobile-friendly tools that eliminate traditional pain points.

No more paper jams, missed transmissions, or expensive hardware. With cloud-based faxing, your team can send and receive documents from anywhere while maintaining the security, compliance, and reliability you need.

With Proven IT, you keep faxing...just smarter.

# Top Digital Fax Challenges Businesses Face Today

While fax remains vital for many businesses, outdated systems create obstacles in security, reliability, and flexibility. Moving to cloud fax can address these issues, but challenges remain that organizations must navigate to fully modernize their communication.

## Aging Hardware

Legacy machines are slow, unreliable, and costly. Older hardware creates frequent interruptions, higher repair expenses, and unnecessary operational risk.

## Security Concerns

Traditional fax isn't encrypted or audit-friendly. Sensitive information can be intercepted, misrouted, or accessed without any visibility, tracking, or control.

## Remote Limitations

On-prem fax simply isn't built for hybrid work. Remote or hybrid employees can't send or receive faxes unless they're physically in the office, creating unnecessary trips just to complete basic tasks.

## Compliance Risks

Lack of logging and control can lead to violations. Without clear oversight of who sends or receives documents, organizations face increased compliance risk and potential penalties.
