![Proven IT logo]

✓ Proven Benefits

➤ **Enhance Safety and Surveillance**

- Deter theft and unauthorized access
- Remotely monitor live video feeds
- Capture clear footage for review

➤ **Gain Operational Visibility**

- Keep an eye on remote areas
- Support incident investigations
- Improve workplace safety

➤ **Integrate and Scale Easily**

- Centralized video management
- Integrate with current alarms
- Scale coverage as needed

How Proven IT Powers Your Business with **Video Security**

Security isn't just about responding to threats—it's about anticipating them. Proven IT's video security solutions combine high-definition surveillance, cloud-based access, and intelligent analytics to protect your people, property, and data.

Our systems are easy to manage, scale with your organization, and seamlessly integrate with access control and environmental monitoring to form a complete security ecosystem. Whether you're overseeing a single site or multiple locations, Proven IT delivers peace of mind in every frame.

Top Video Surveillance Challenges Businesses Face Today

Outdated or disconnected video systems often leave critical blind spots and your organization vulnerable. Without modern surveillance tools, you risk missing key events and delaying response when every second counts.

Low-Quality Footage

Blurry or grainy video makes it hard to identify people, vehicles, or incidents—rendering surveillance ineffective when it matters most. Low-res cameras can miss key details, leaving security gaps.

Limited Access

Traditional surveillance limits viewing to on-site monitors, preventing real-time remote access. This slows response times and makes it harder to monitor multiple sites at once.

Missed Alerts

Delayed or missed notifications can allow security incidents to escalate unnoticed, increasing risks to people and property. Without intelligent alerting and real-time monitoring, your team might only discover issues after the fact.

Poor Integration

Disconnected security systems create silos that complicate management and reduce effectiveness. Poor integration with access control and alarms limits quick response and coordinated defense.
